WP 2

ANALISI DELLO STATO DELL'ARTE

Available papers

- Research source: Science Direct
- Keywords:
 - "fault detection", "diagnostic", "FDD", and "diagnosis"

List of available projects

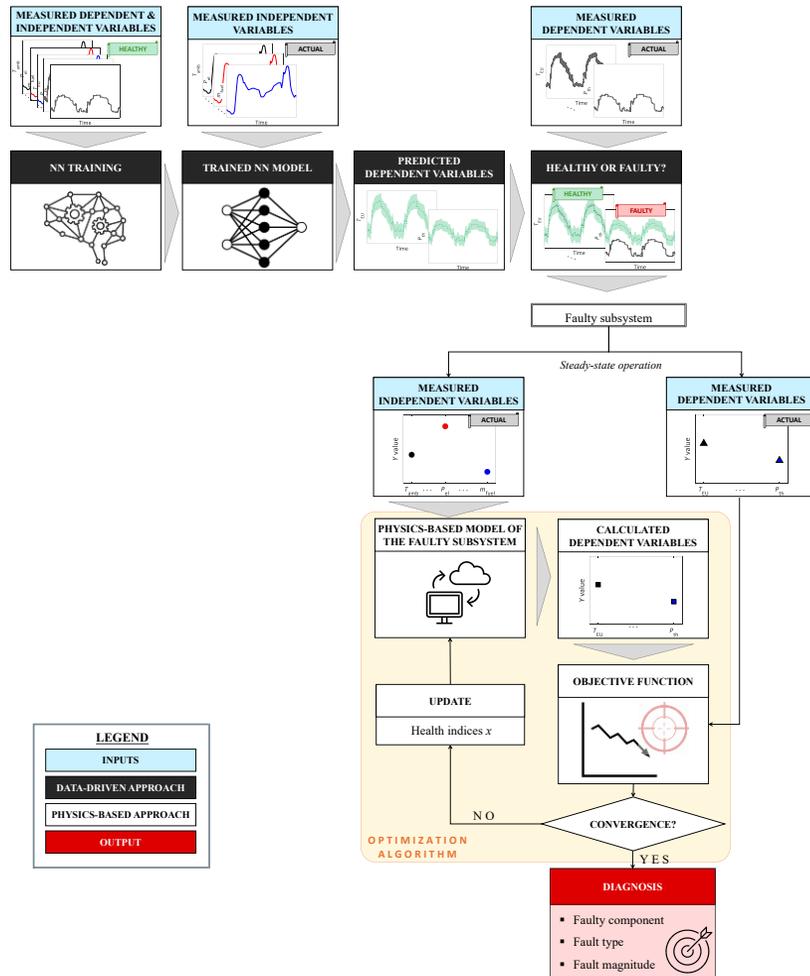

- Research source: Cordis

Project	Duration	Focus
Energynius	2019-2021	Design and management of integrated energy systems
WEDISTRICIT	2019-2023	Integration of multiple sources of renewable energy and excess heat at three demonstration sites
ESPON TANDEM	2024-2028	Creation of the largest EU-backed database of energy communities
ASCEND	2023-2027	Implementation of PCED (Positive clean energy district) in multiple cities
D4Heat	2024-2027	Data-driven diagnosis of district heating substations

WP 3

SVILUPPO DI TOOL PER LA DIAGNOSI DI SISTEMI MULTI-ENERGIA & RETI DI TELERISCALDAMENTO

Data-driven approach

Identification of the faulty sub-system

- Transient and steady-state operation

Physics-based approach

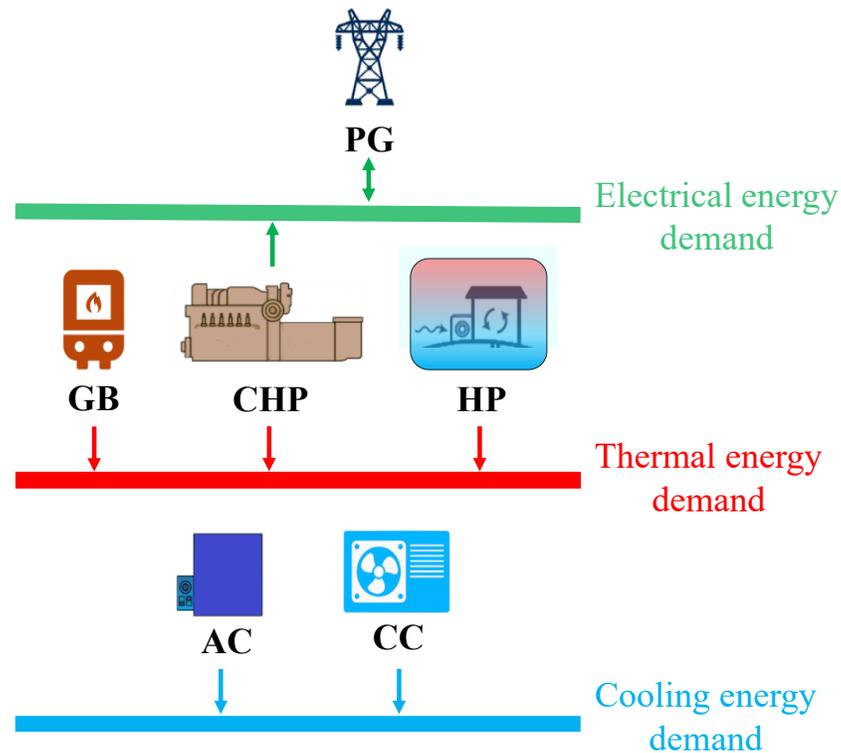

Identification of the fault type and magnitude

- Steady-state operation

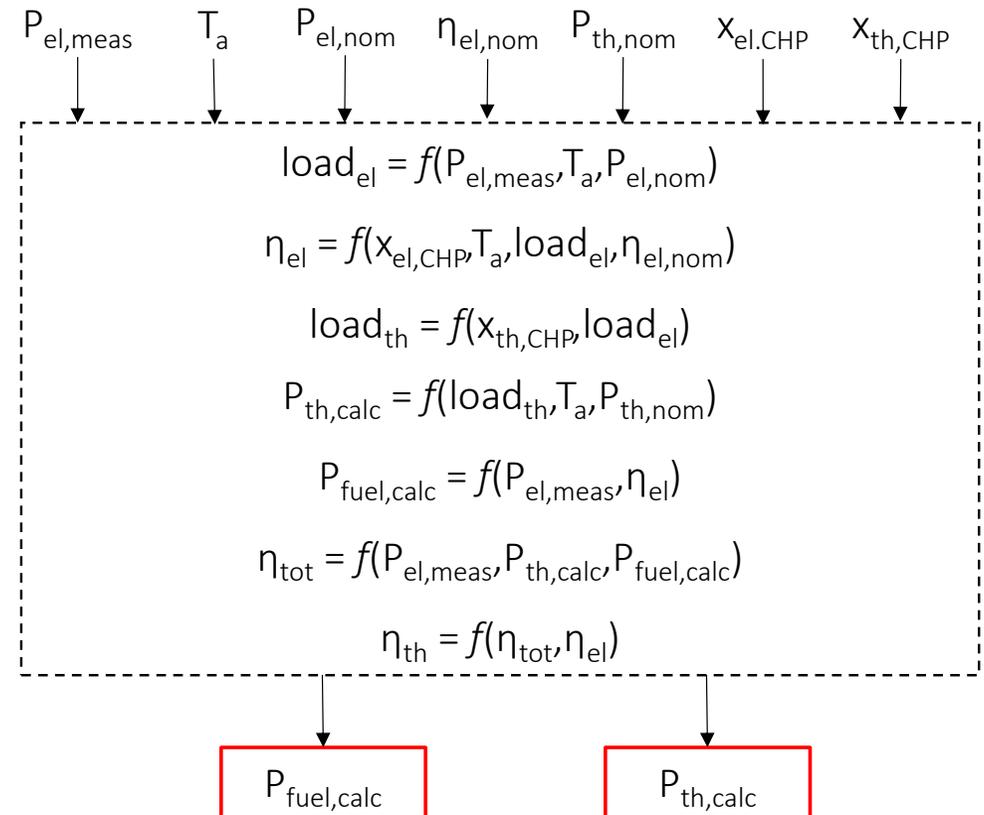

SVILUPPO DI TOOL PER LA DIAGNOSI DI SISTEMI MULTI-ENERGIA

Multi-energy system

Combined heat and power system (CHP)

Developed physics-based models: gas boiler, CHP, heat pump, compressor chiller, absorption chiller

Campus of University of Parma

Gas boiler

1 MW_t 2.6 MW_t 3.0 MW_t 3.0 MW_t 3.5 MW_t

Heat pump

1360 kW_t

CHP (natural gas)

1560 kW_e; 1648 kW_t

Compressor chiller

2500 kW_c 2500 kW_c 2500 kW_c

CHP (biomass)

100 kW_e; 215 kW_t

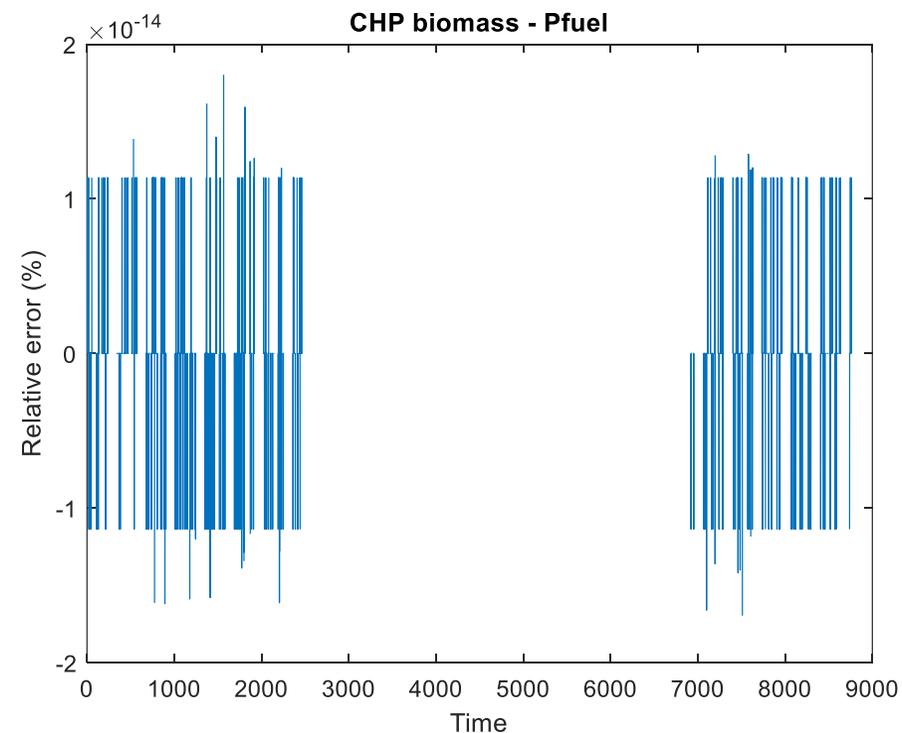

Absorption chiller

1189 kW_c

Validation of the physics-based model under healthy operation

model
data

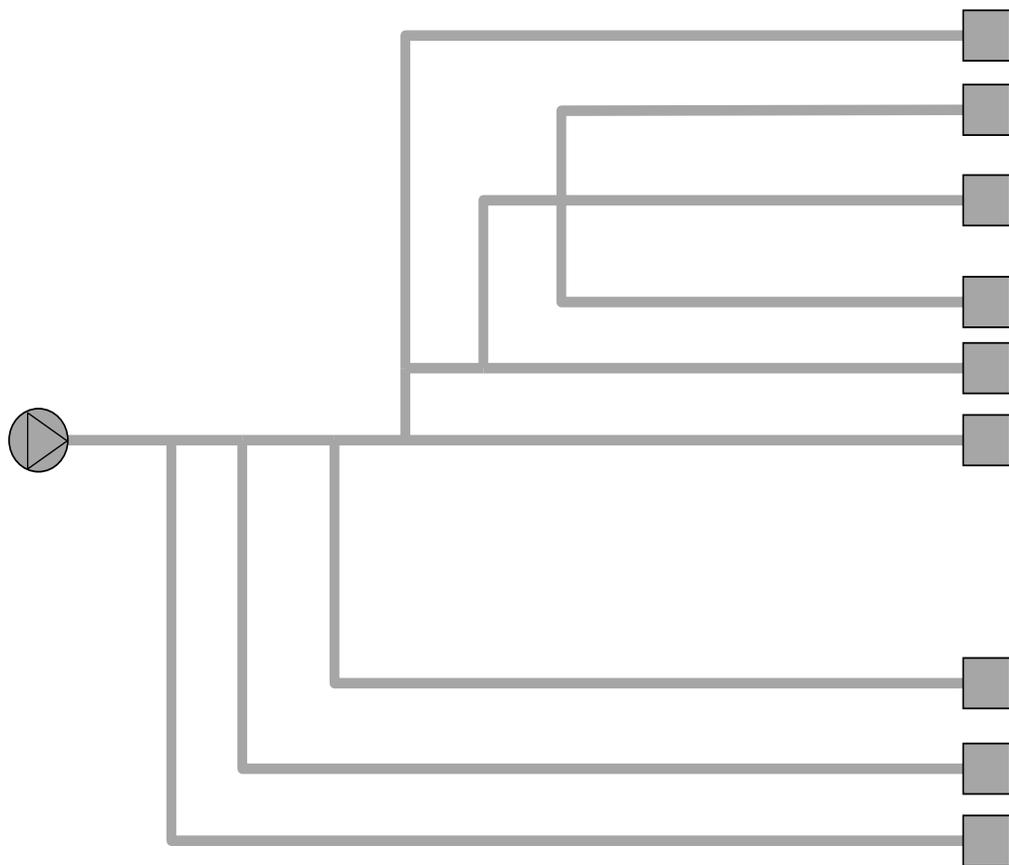

Next step: diagnosis of the multi-energy system

SVILUPPO DI TOOL PER LA DIAGNOSI DI RETI DI TELERISCALDAMENTO

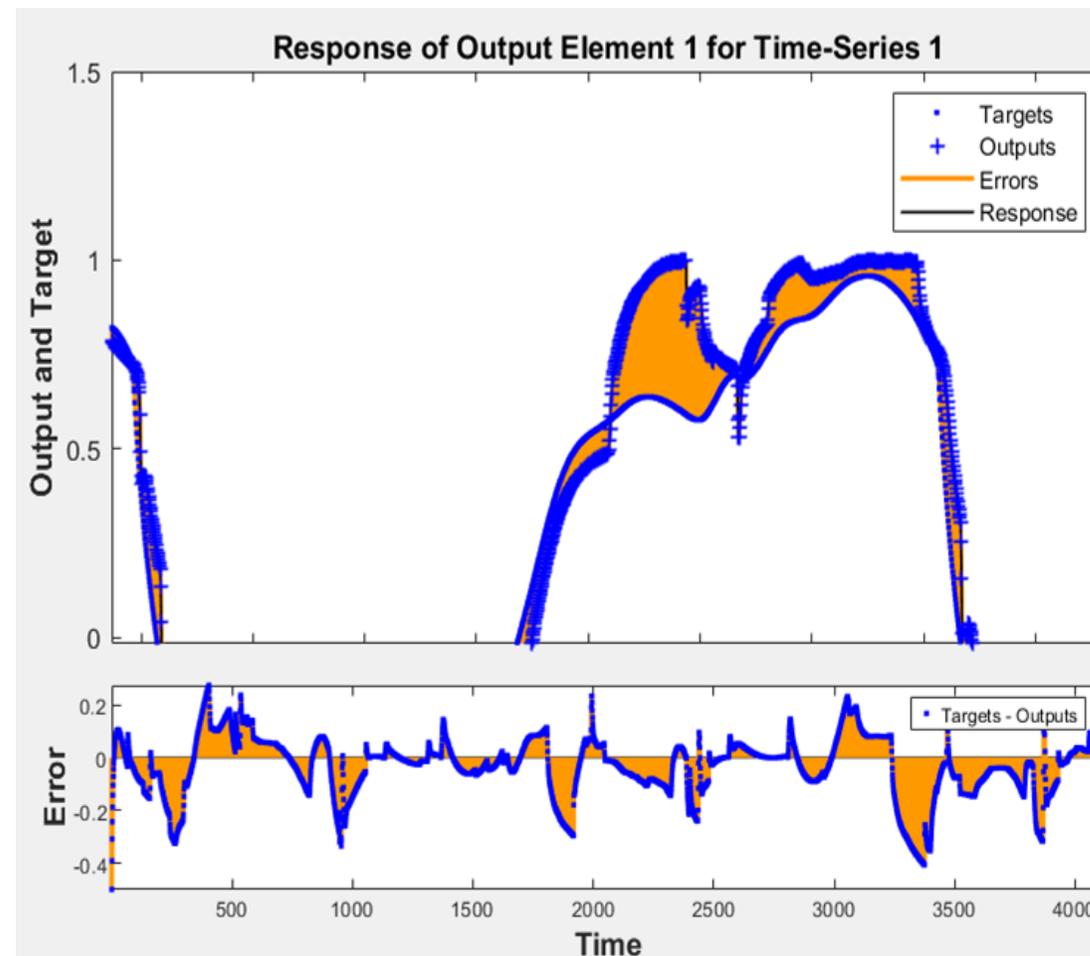

District heating network of the Campus of University of Parma

- 9 substations
- 32 pipes (supply + return pipelines)
- 2 pumps

- 18 datasets with faults and without faults

For each substation

PHYSICS-BASED MODEL OF THE DHN

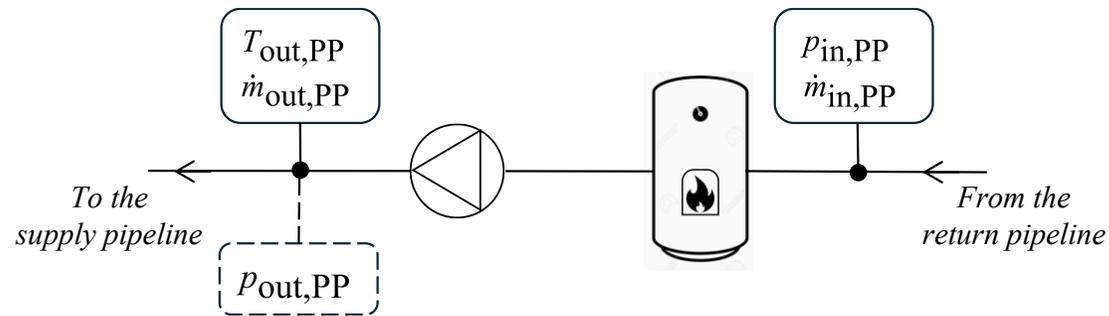

Pumping station model

Distribution network model

Substation model

Faulty component	Fault type
Pump	<ul style="list-style-type: none"> Head reduction
Pipe	<ul style="list-style-type: none"> Leakages Anomalous heat losses Anomalous pressure losses
Valve	<ul style="list-style-type: none"> Incorrect valve opening angle Leakages
Heat exchanger	<ul style="list-style-type: none"> Leakages Anomalous heat losses Anomalous pressure losses

Pumping station model

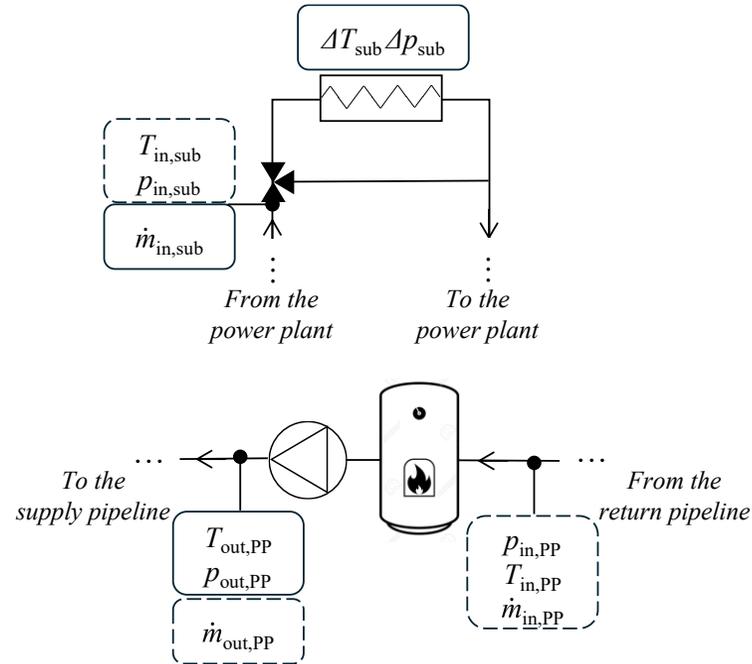

$$OF_{\text{pump}} = \left(\frac{p_{\text{out,PP}}^{\text{target}} - p_{\text{out,PP}}}{p_{\text{out,PP}}^{\text{target}}} \right)^2$$

Minimize the *OF* by using an optimization algorithm based on a gradient-based method

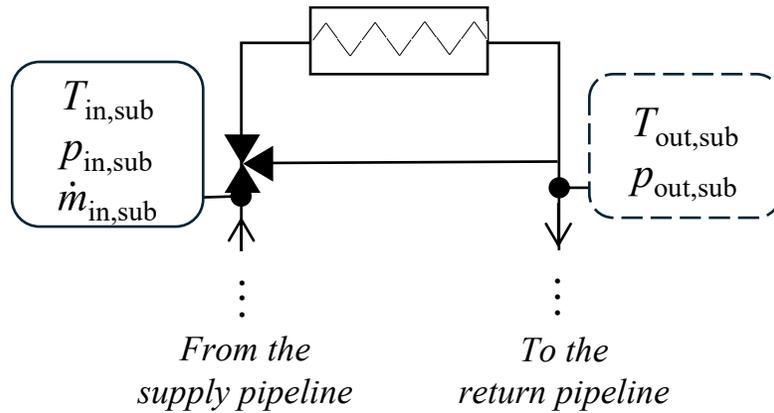

Distribution network model

Minimize the *OF* by using an optimization algorithm based on a gradient-based method

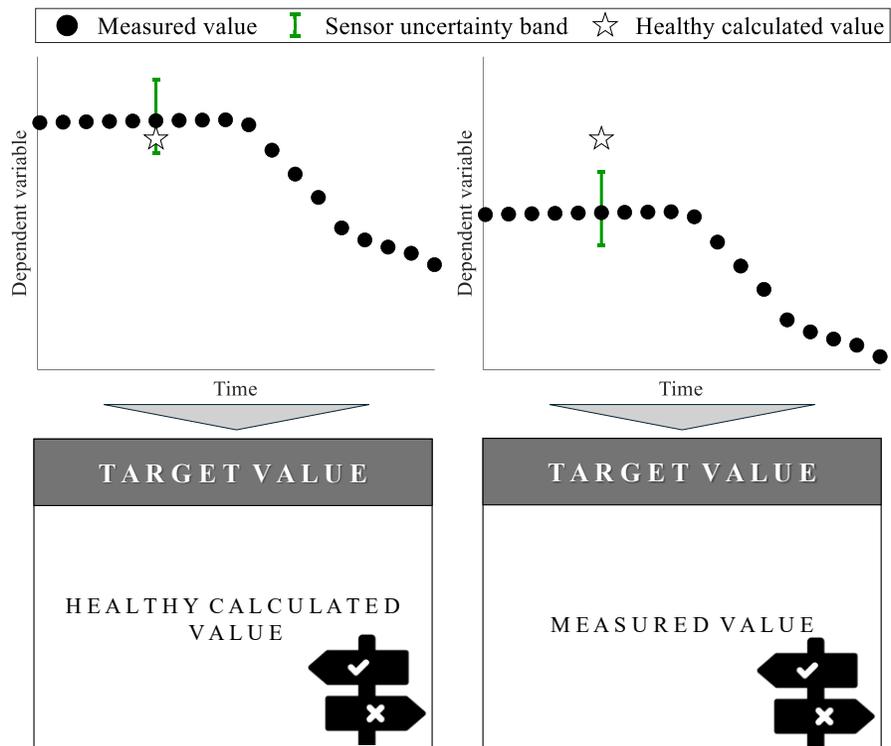

$$OF_{\text{distr.net}} = \left(\frac{\dot{m}_{\text{out,PP}}^{\text{target}} - \dot{m}_{\text{out,PP}}}{\dot{m}_{\text{out,PP}}^{\text{target}}} \right)^2 + \left(\frac{\dot{m}_{\text{in,PP}}^{\text{target}} - \dot{m}_{\text{in,PP}}}{\dot{m}_{\text{in,PP}}^{\text{target}}} \right)^2 + \left(\frac{T_{\text{in,PP}}^{\text{target}} - T_{\text{in,PP}}}{T_{\text{in,PP}}^{\text{target}}} \right)^2 + \left(\frac{p_{\text{in,PP}}^{\text{target}} - p_{\text{in,PP}}}{p_{\text{in,PP}}^{\text{target}}} \right)^2 + \sum_{i=1}^{N_{\text{sub}}} \left(\frac{p_{\text{in,sub},i}^{\text{target}} - p_{\text{in,sub},i}}{p_{\text{in,sub},i}^{\text{target}}} \right)^2 + \left(\frac{T_{\text{in,sub},i}^{\text{target}} - T_{\text{in,sub},i}}{T_{\text{in,sub},i}^{\text{target}}} \right)^2$$

Substation model

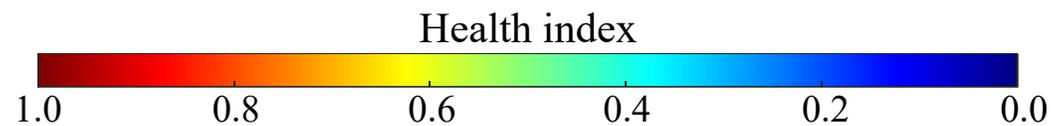

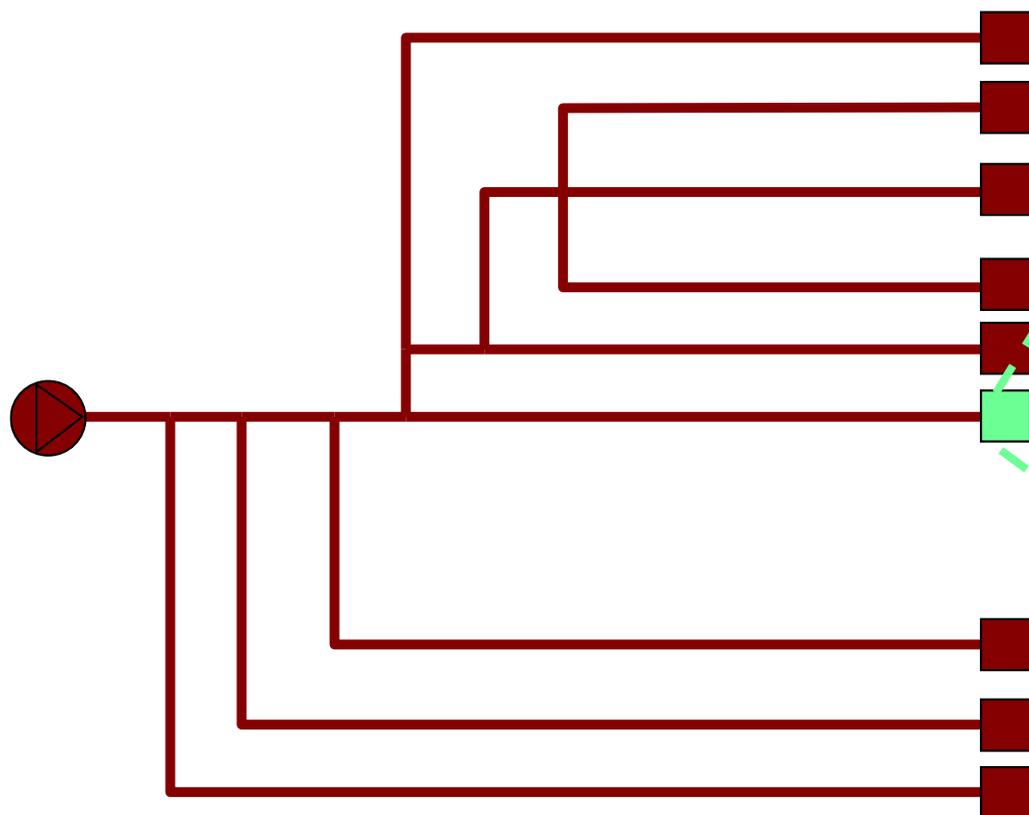

Minimize the *OF* by using an optimization algorithm based on a gradient-based method

$$OF_{sub} = \sum_{i=1}^{N_{sub}} \left(\frac{p_{out,sub,i}^{target} - p_{out,sub,i}}{p_{out,sub,i}^{target}} \right)^2 + \left(\frac{T_{out,sub,i}^{target} - T_{out,sub,i}}{T_{out,sub,i}^{target}} \right)^2$$

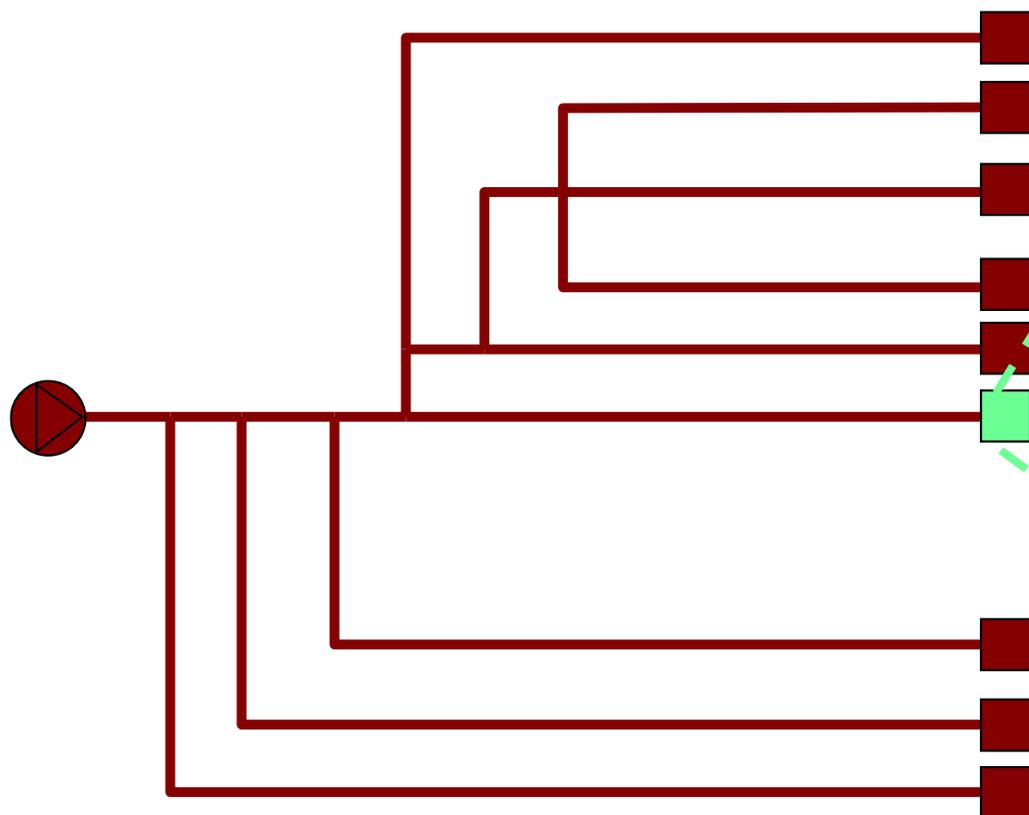

Sensor	Uncertainty band
Flow meter	$\pm 0.3 \%$ of reading value
Thermocouple	$\pm 0.5 \text{ }^\circ\text{C}$
Pressure gauge	$\pm 0.25 \%$ of the full-scale

Diagnosis of dataset #1

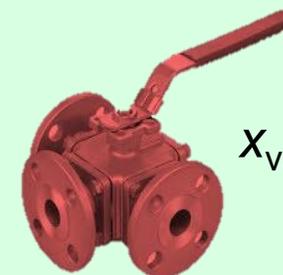

Diagnosis of dataset #1

SUBSTATION #4

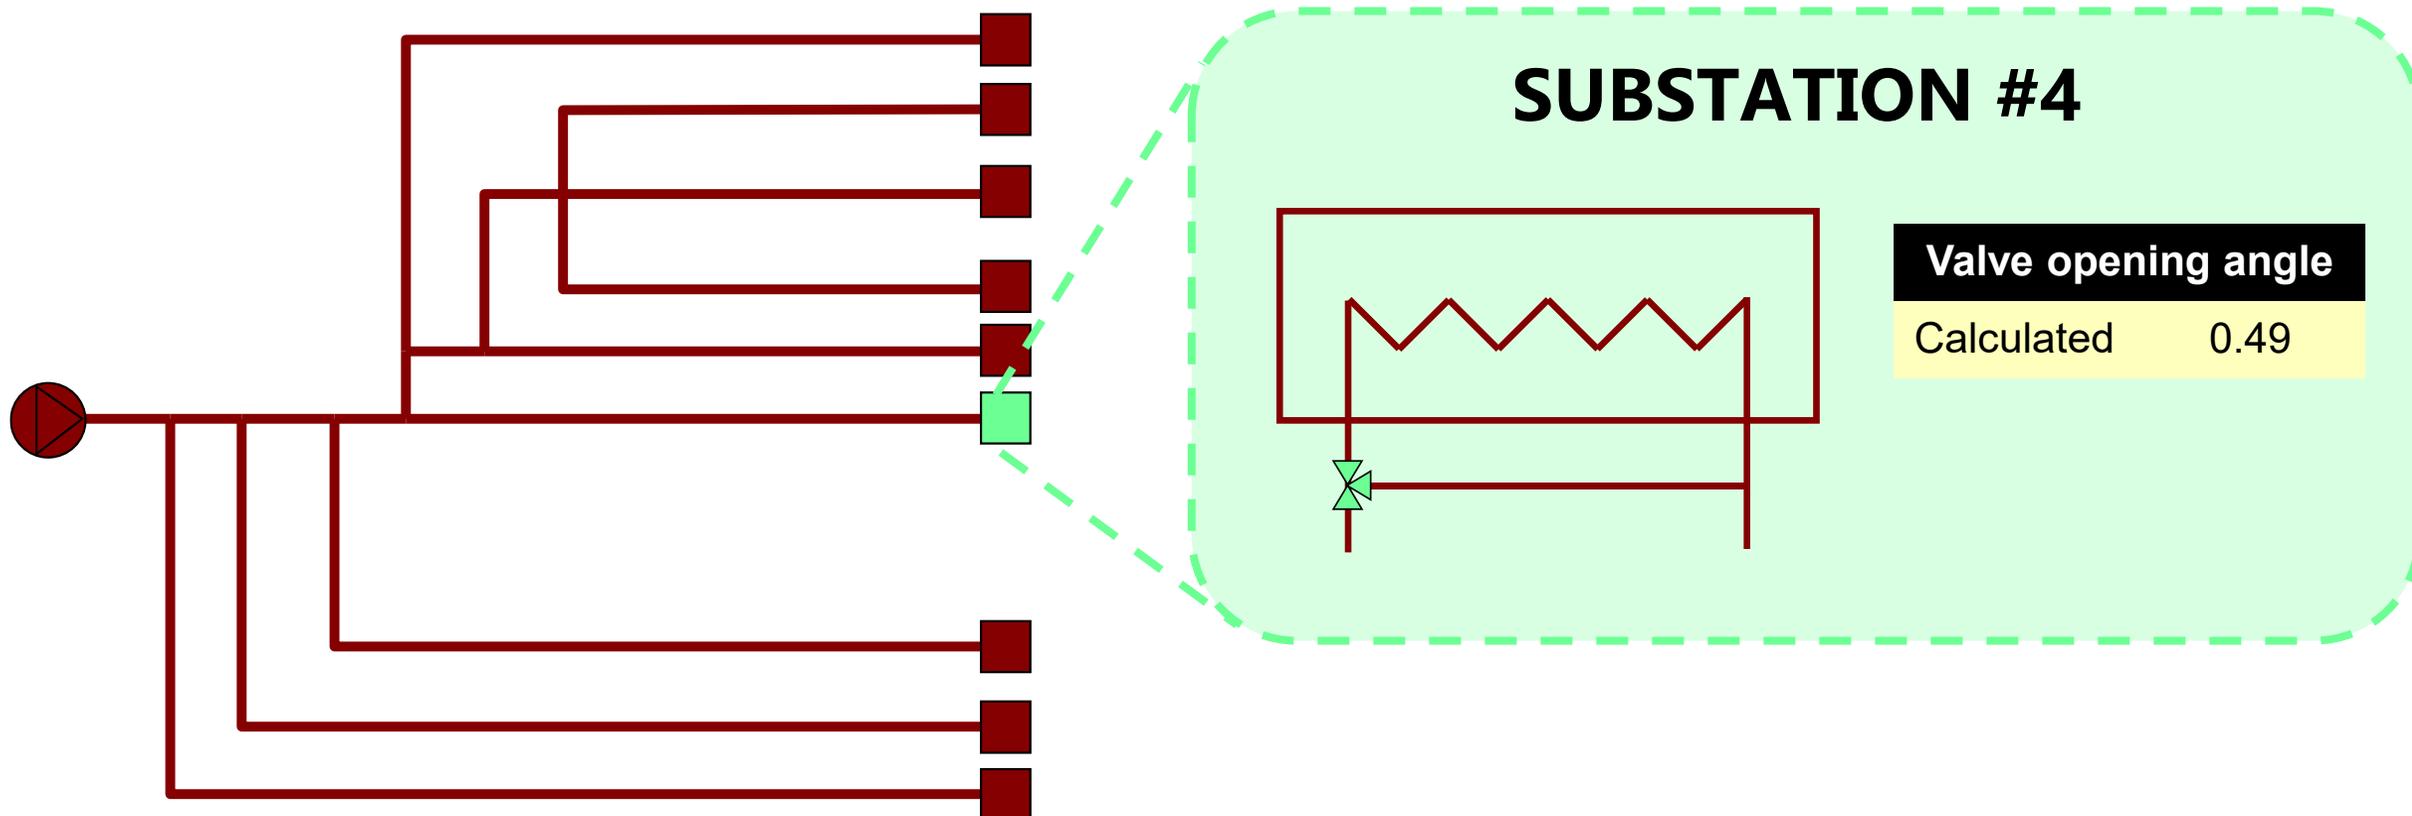

$$X_{\text{leak}} = 1.00$$
$$X_{\text{th.loss}} = 1.00$$
$$X_{\text{p.loss}} = 1.00$$

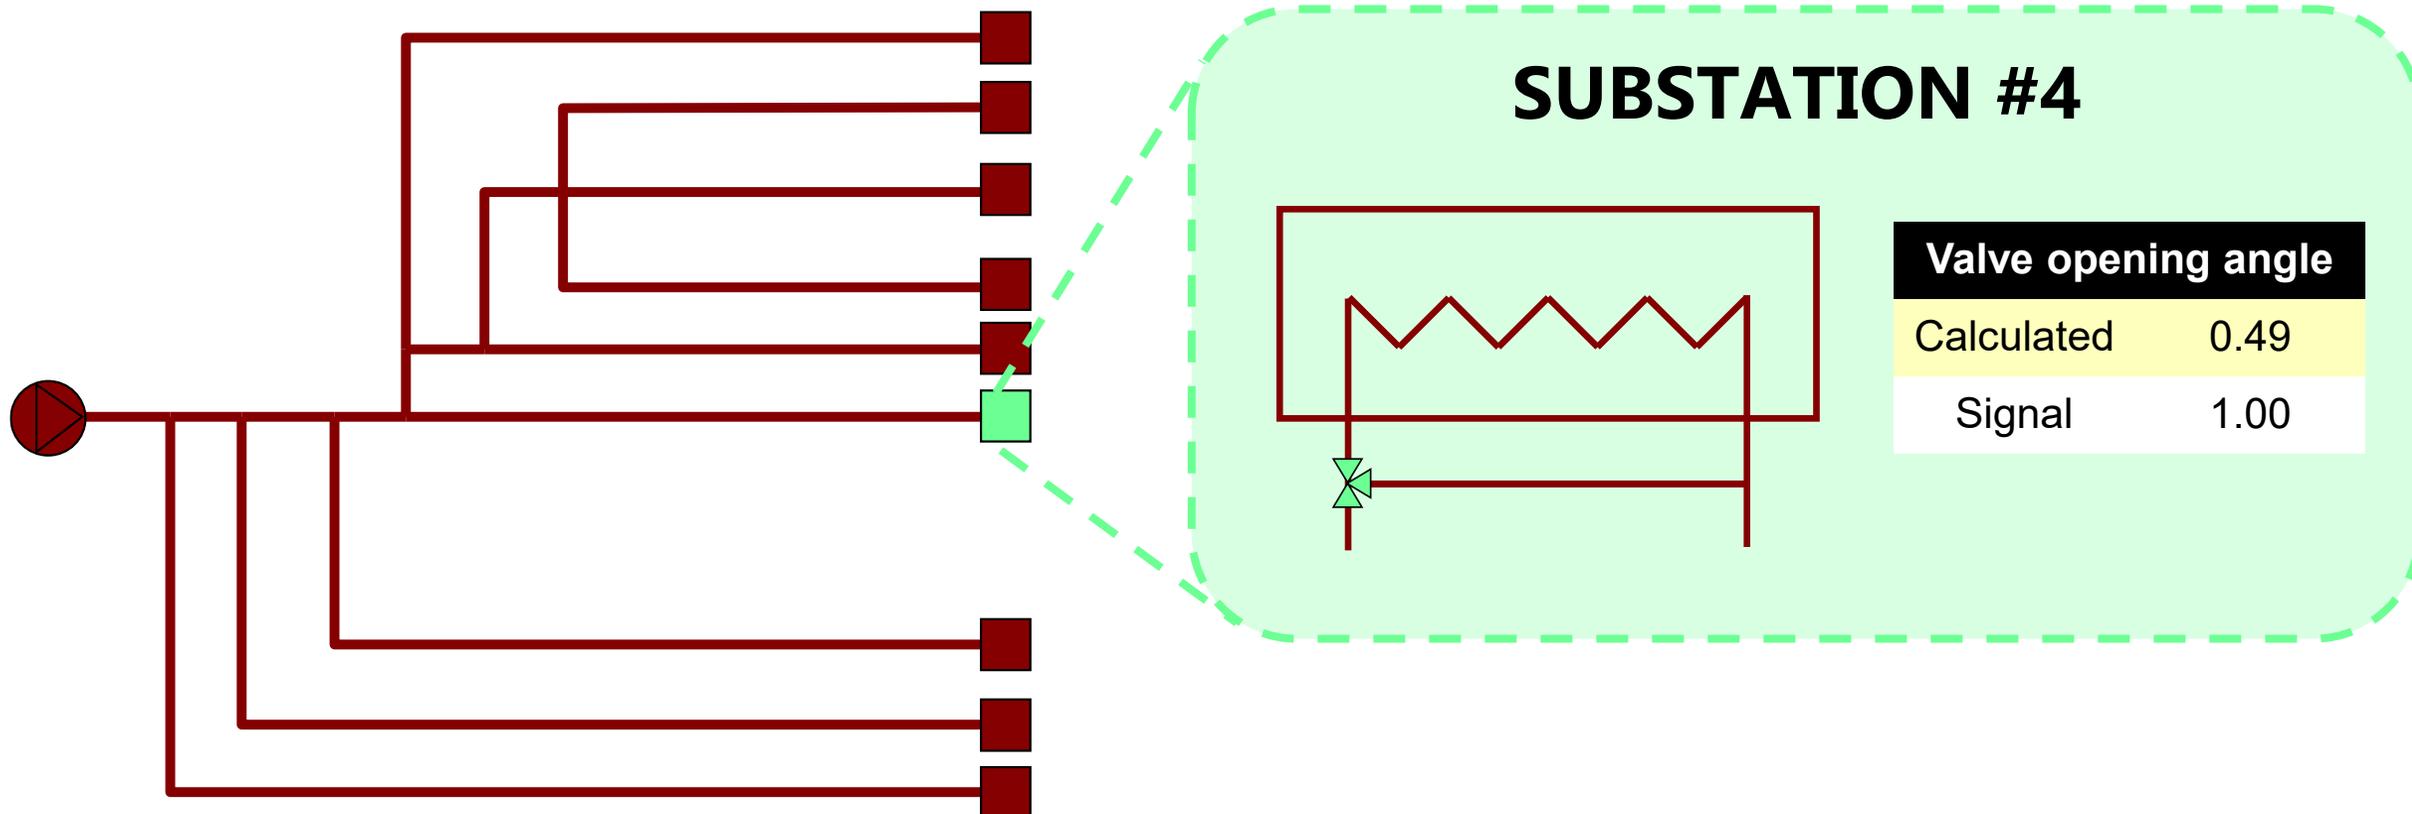

$$X_{\text{valve}} = 0.49$$

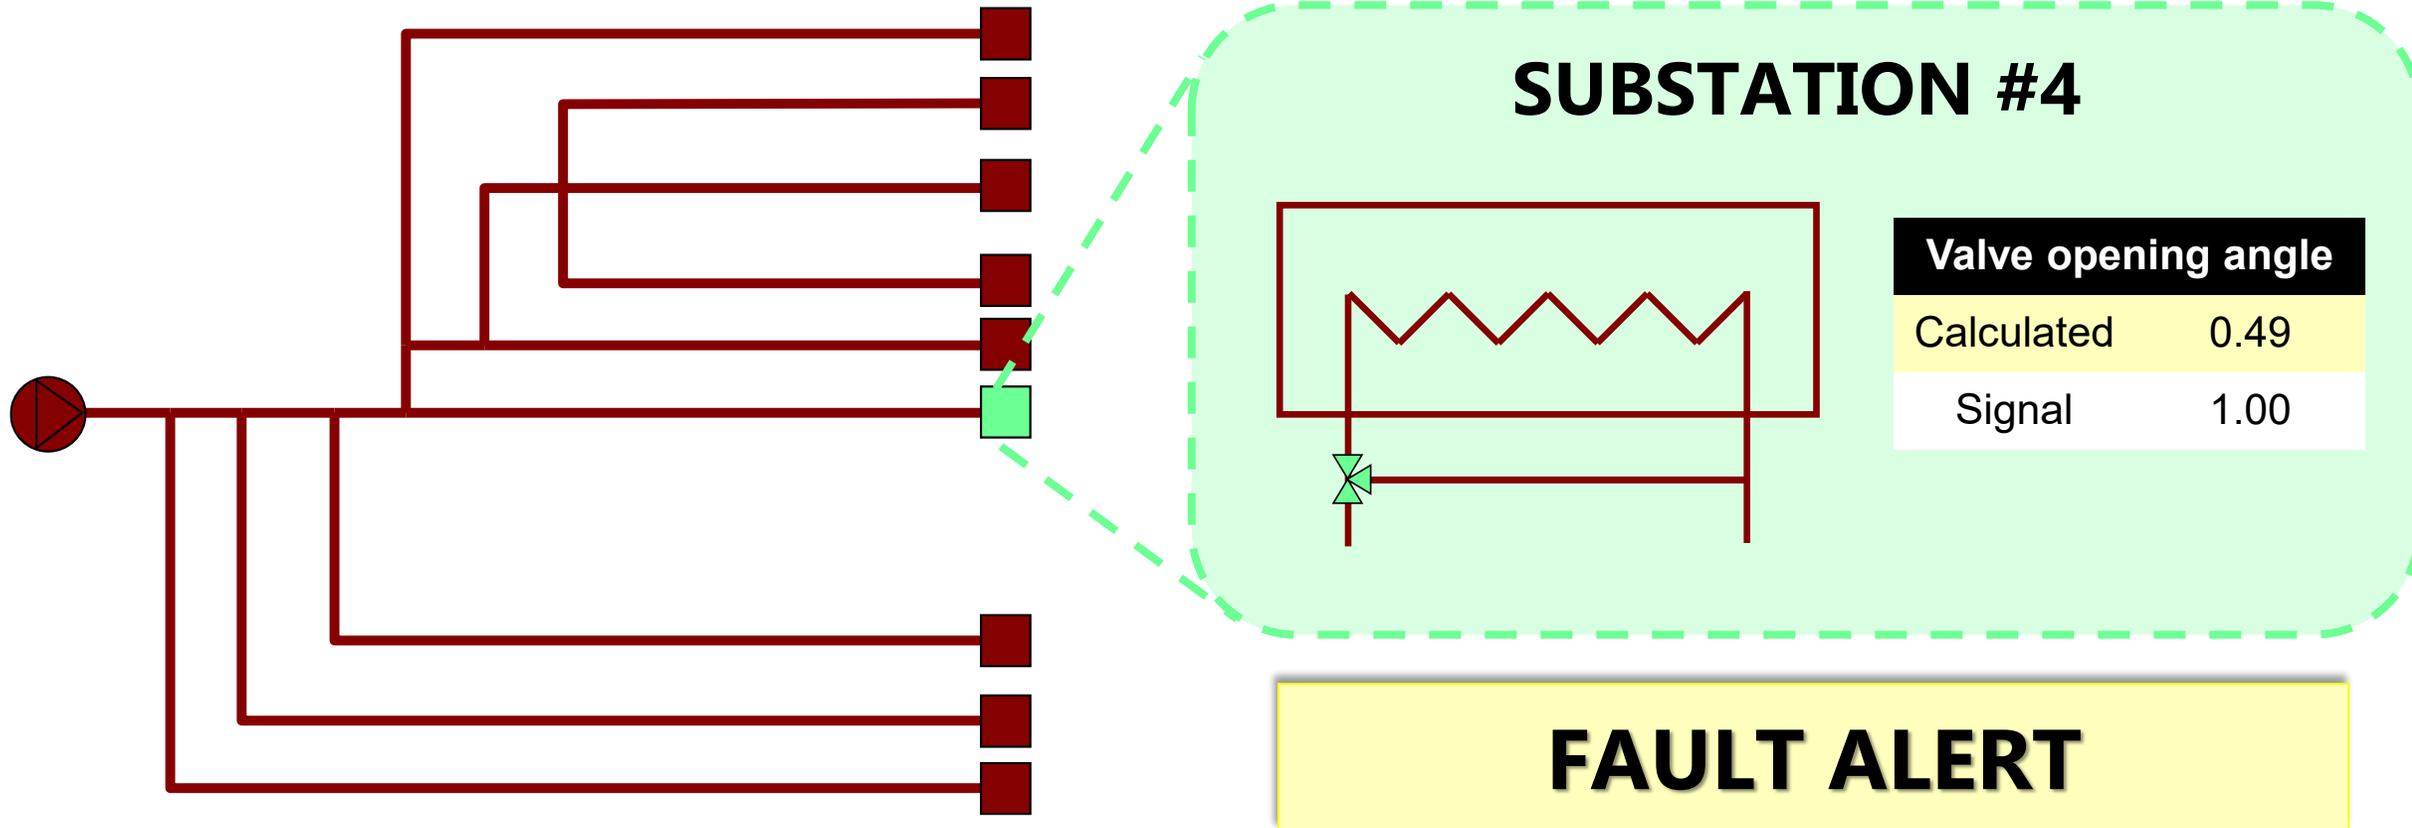

Diagnosis of dataset #1

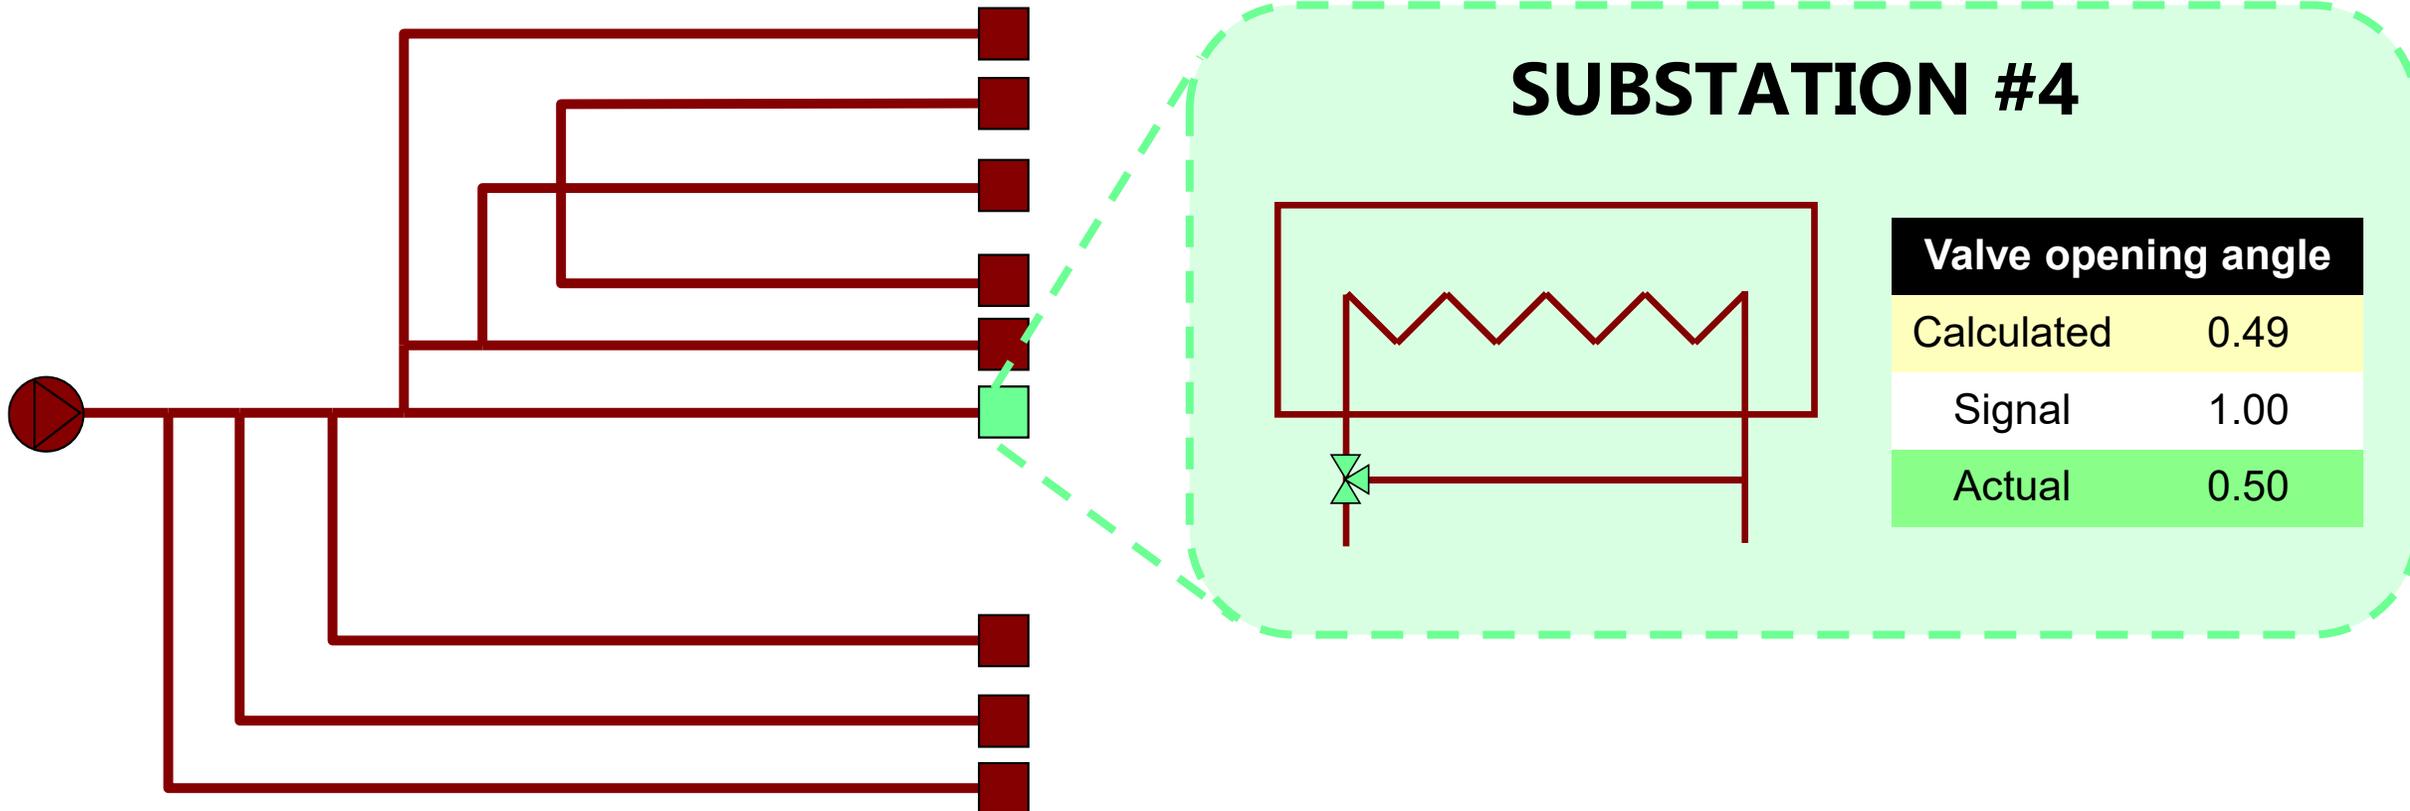

Diagnosis of dataset #1

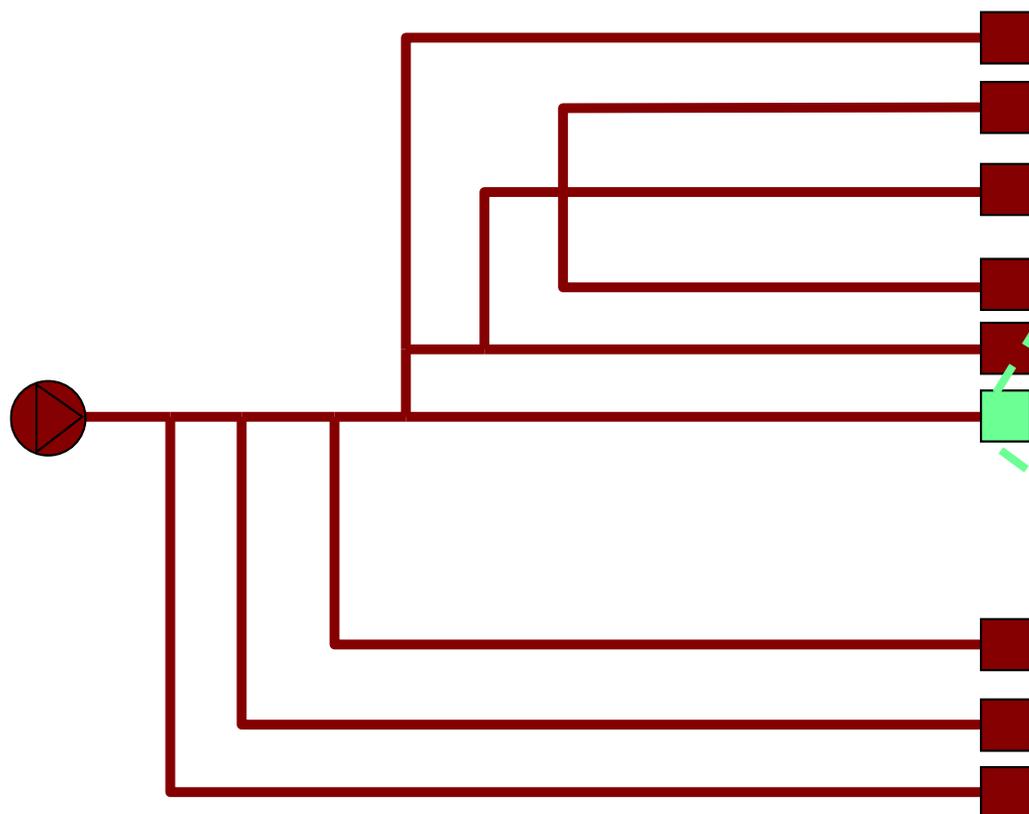

Diagnosis of dataset #1

Diagnosis of dataset #1

Diagnosis of dataset #1

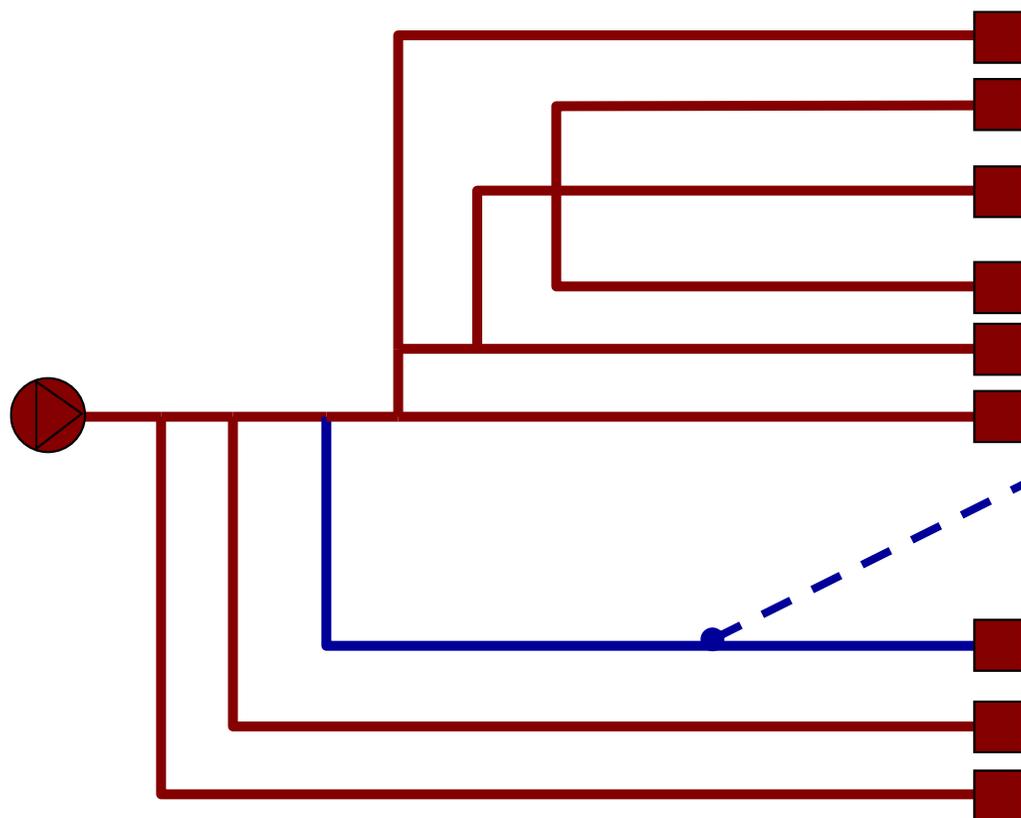

SUBSTATION #4

Valve opening angle	
Calculated	0.49
Signal	1.00
Actual	0.50

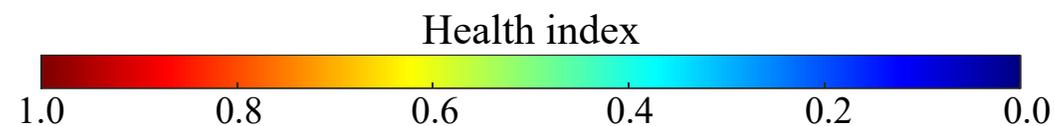

**FAULT DETECTED
& IDENTIFIED**

Diagnosis of dataset #2

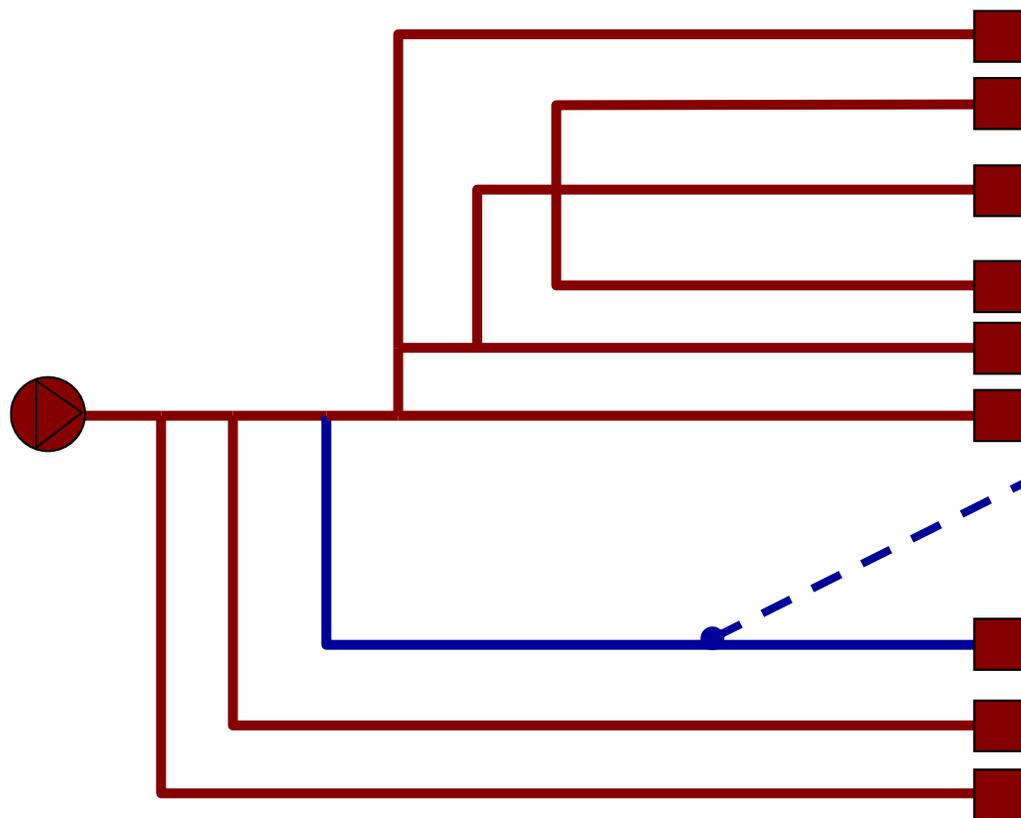

PIPE #6

A callout box with a light blue background and a dashed blue border. It contains the text "PIPE #6" and a red warning sign icon (a triangle with an exclamation mark), indicating a critical issue with this pipe.

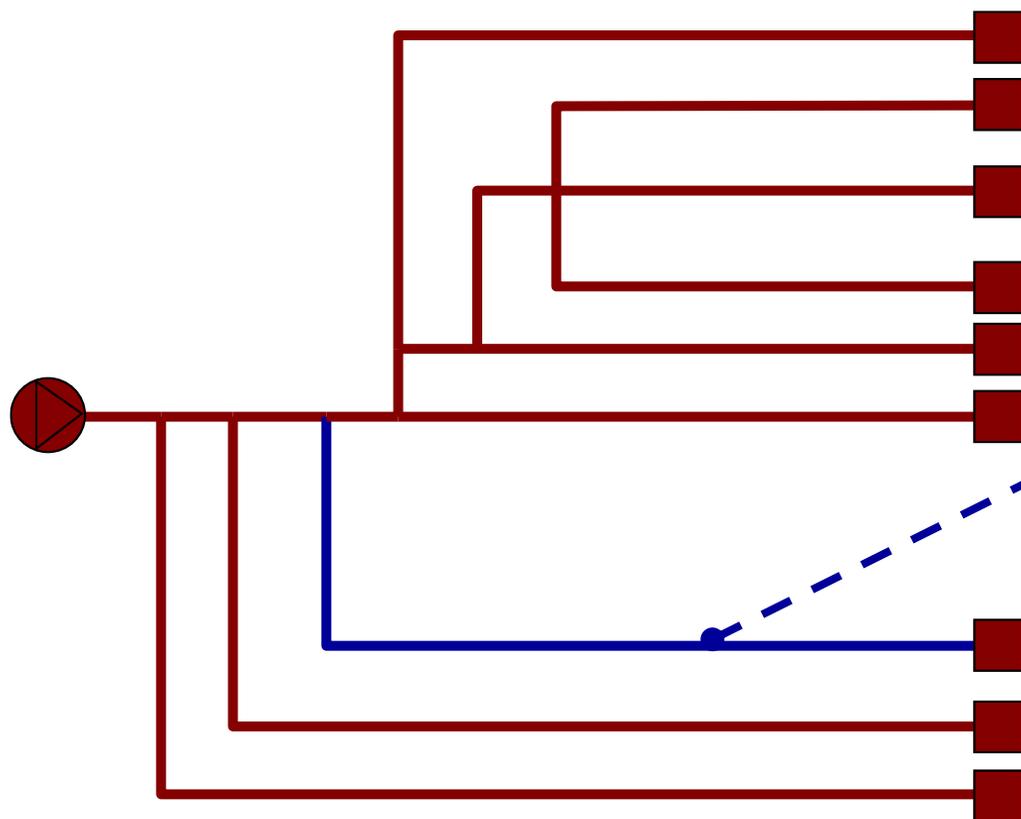

Diagnosis of dataset #2

PIPE #6

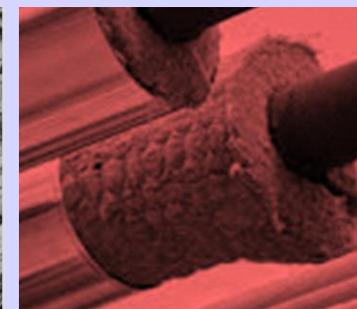

Diagnosis of dataset #2

PIPE #6

$$x_{\text{leak}} = 1.00$$

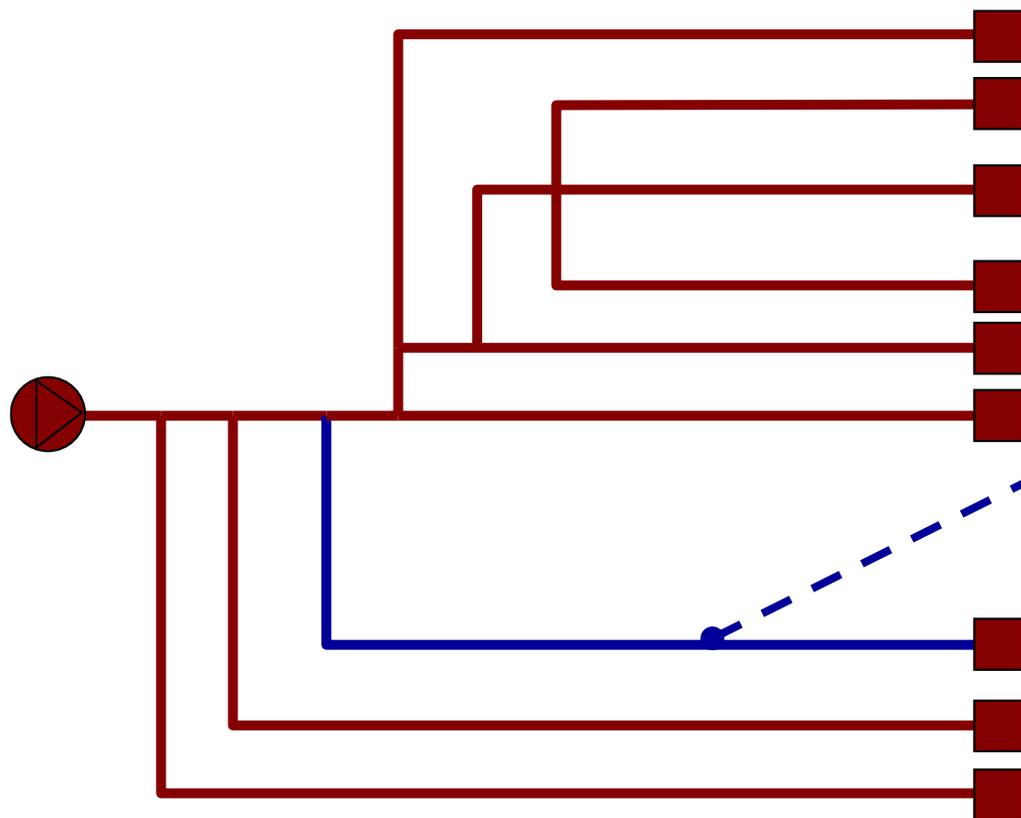

$$x_{\text{th.loss}} = 0.02$$

$$x_{\text{p.loss}} = 1.00$$

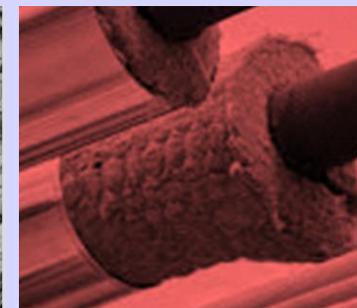

Diagnosis of dataset #2

PIPE #6

$$x_{\text{leak}} = 1.00$$

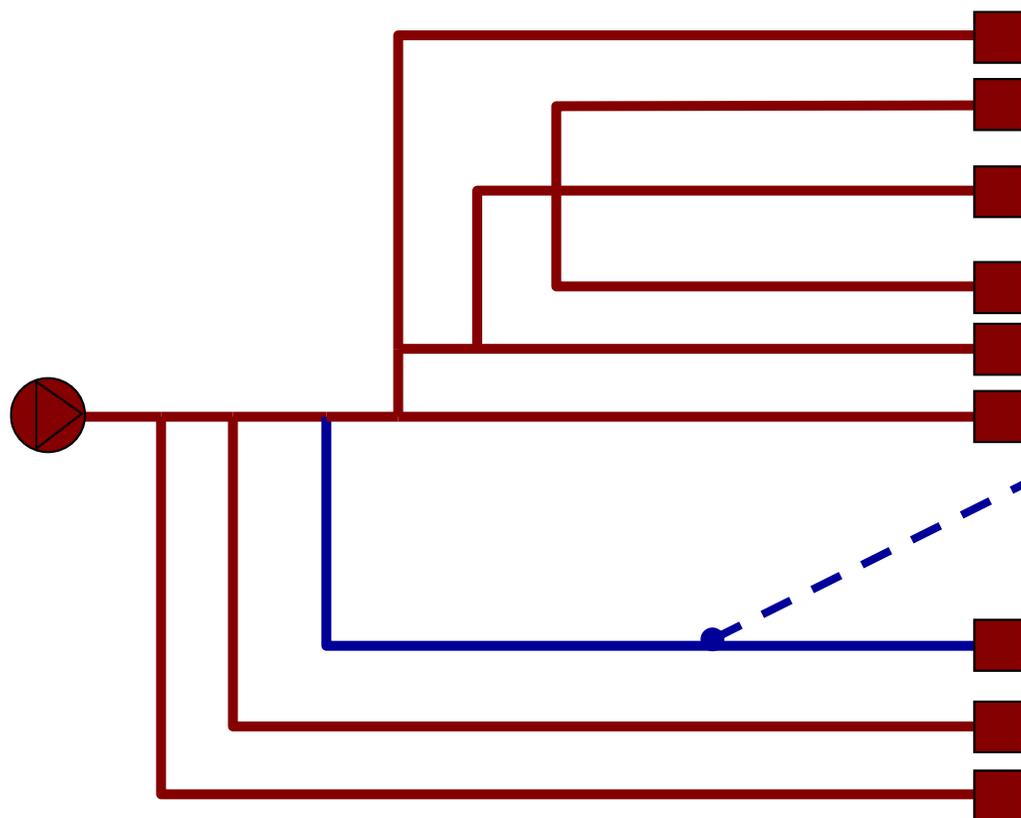

$$x_{\text{th.loss}} = 0.02$$

$$x_{\text{p.loss}} = 1.00$$

FAULT ALERT

Diagnosis of dataset #2

PIPE #6

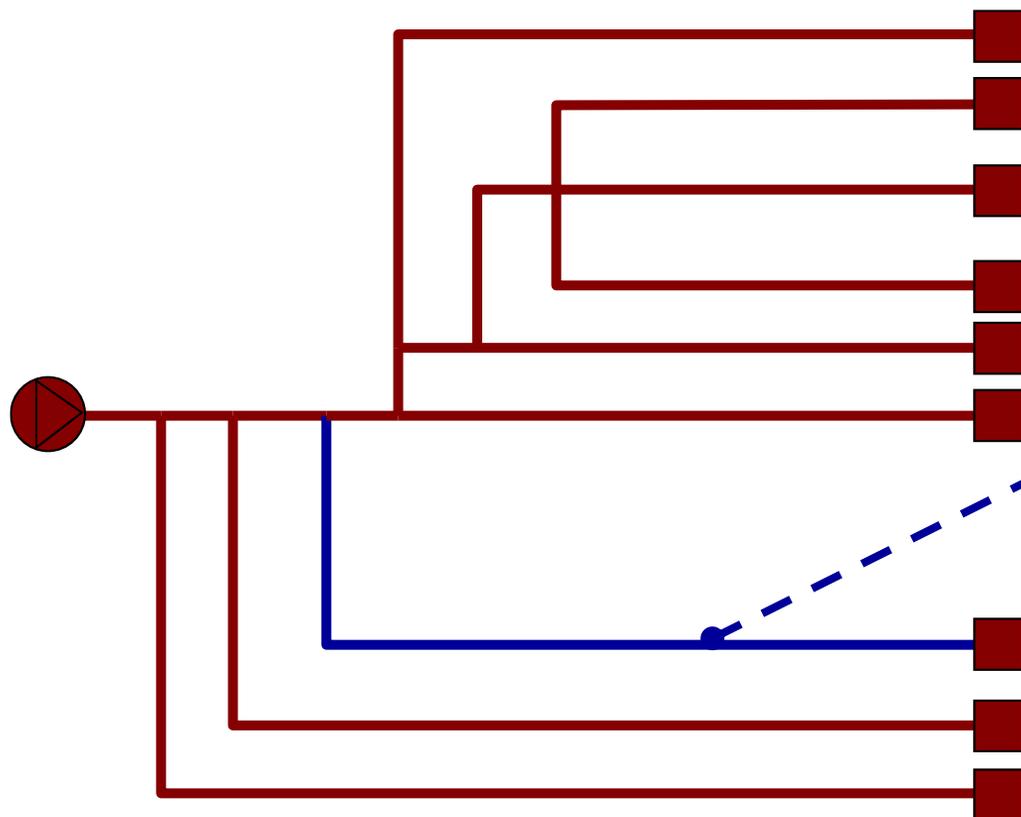

$$x_{th.loss} = 0.02$$

λ_{ins} [W·m⁻¹·K⁻¹]

Calculated	1.9
------------	-----

Diagnosis of dataset #2

PIPE #6

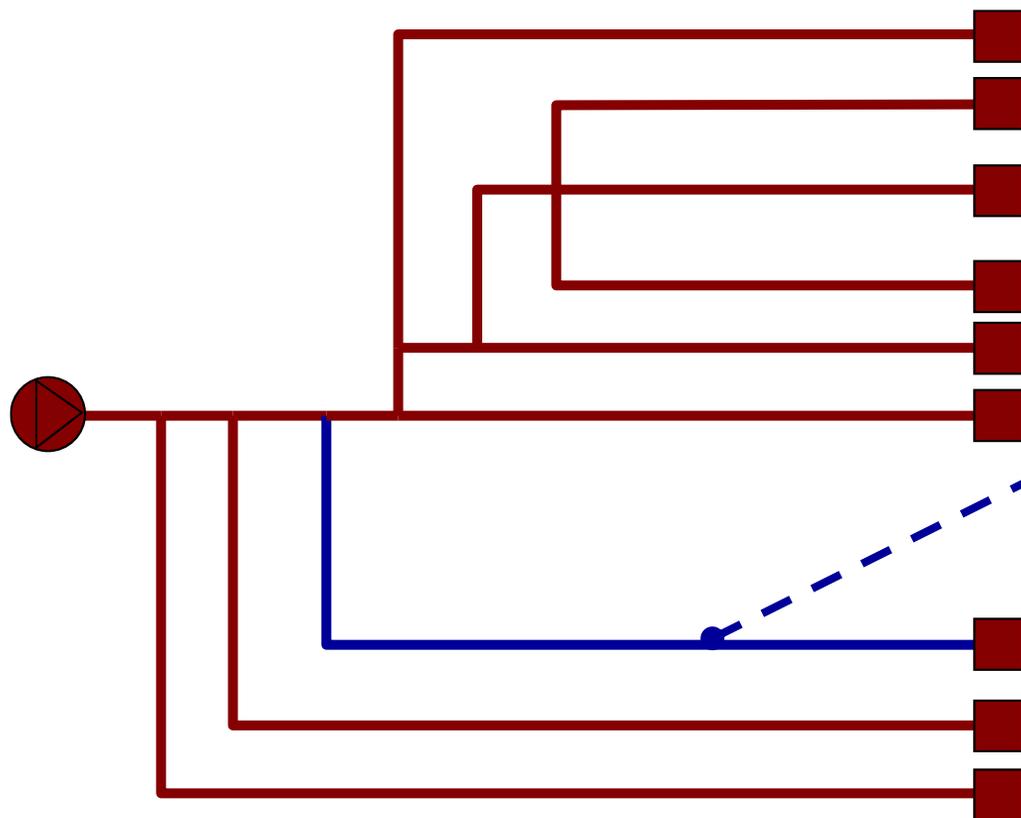

$$x_{th.loss} = 0.02$$

λ_{ins} [W·m⁻¹·K⁻¹]

Calculated	1.9
Healthy	0.04

Diagnosis of dataset #2

PIPE #6

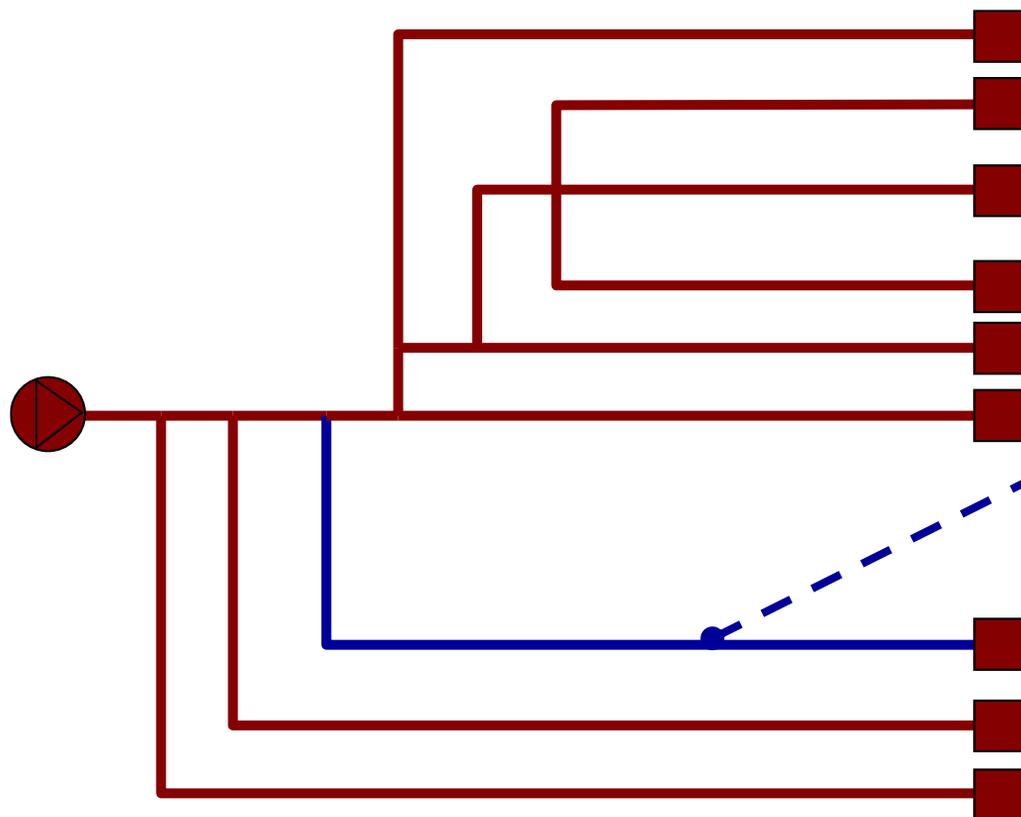

$$x_{th.loss} = 0.02$$

λ_{ins} [W·m⁻¹·K⁻¹]

Calculated	1.9
Healthy	0.04
Actual	2.0

Diagnosis of dataset #2

PIPE #6

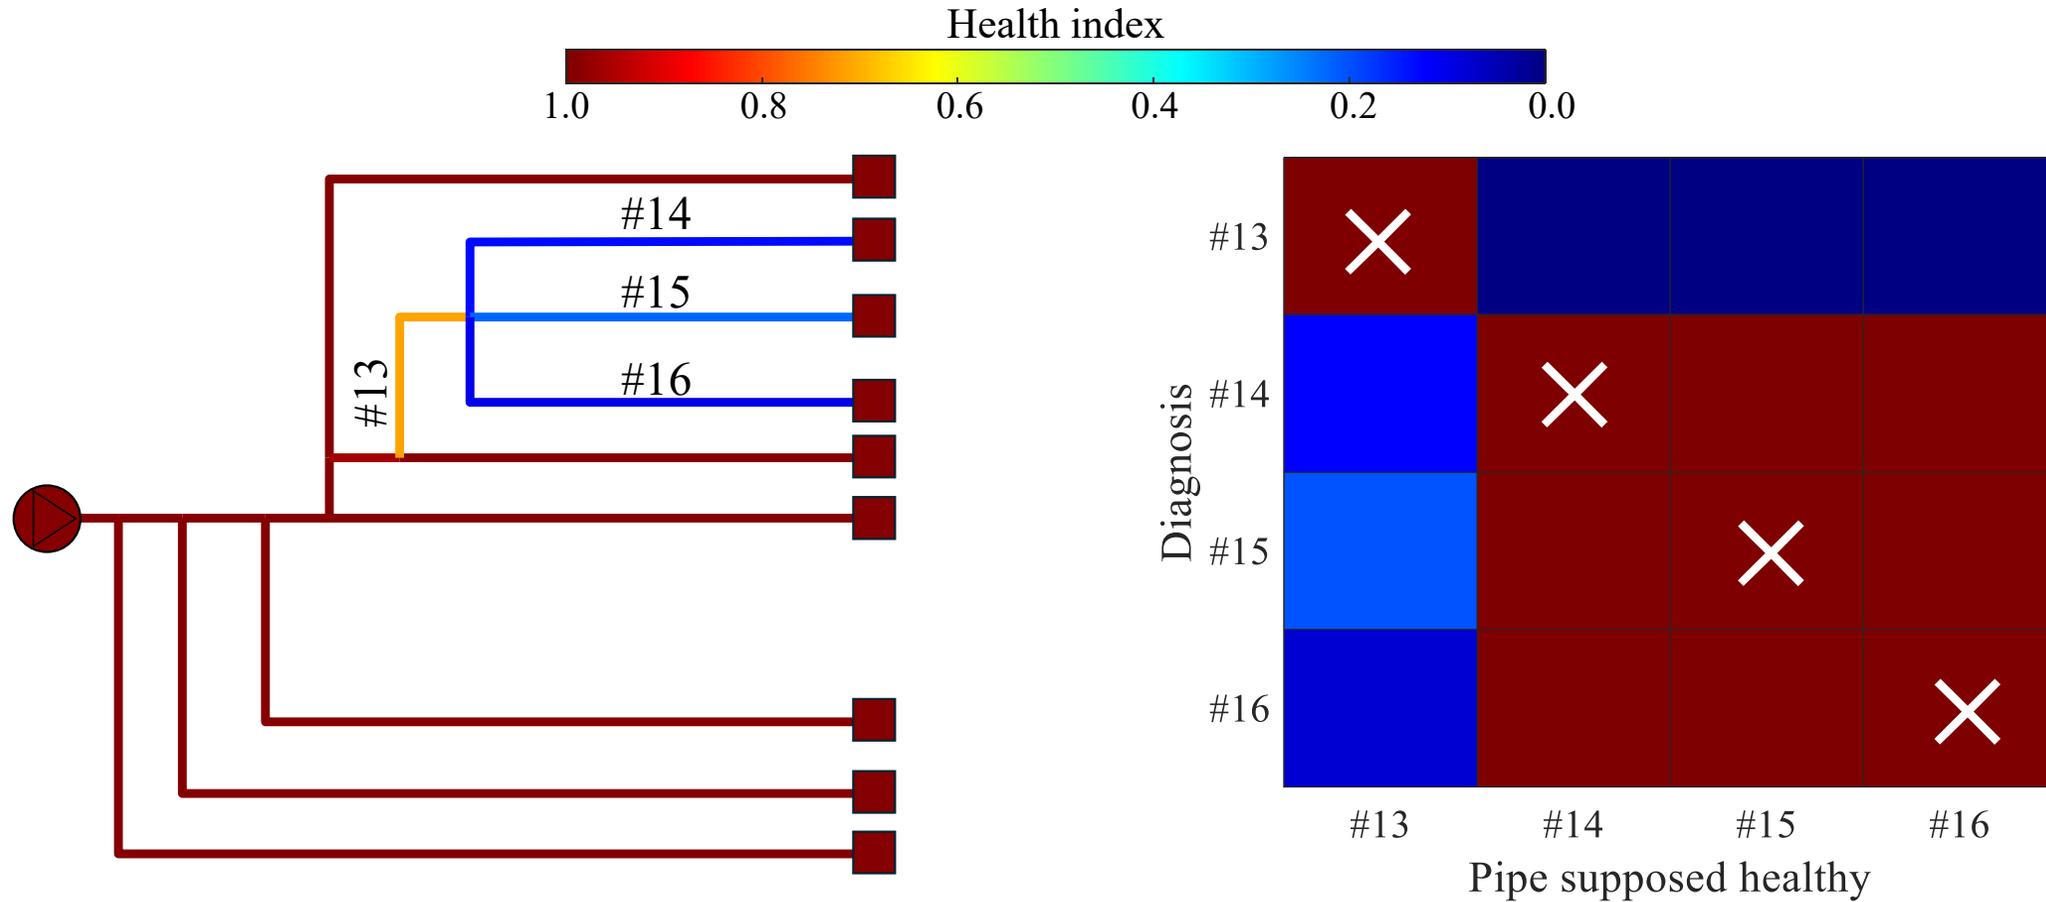

$$x_{th.loss} = 0.02$$

λ_{ins} [$W \cdot m^{-1} \cdot K^{-1}$]

Calculated	1.9
Healthy	0.04
Actual	2.0

**FAULT DETECTED
& IDENTIFIED**

Diagnosis of dataset #3
